PureMVC烷结

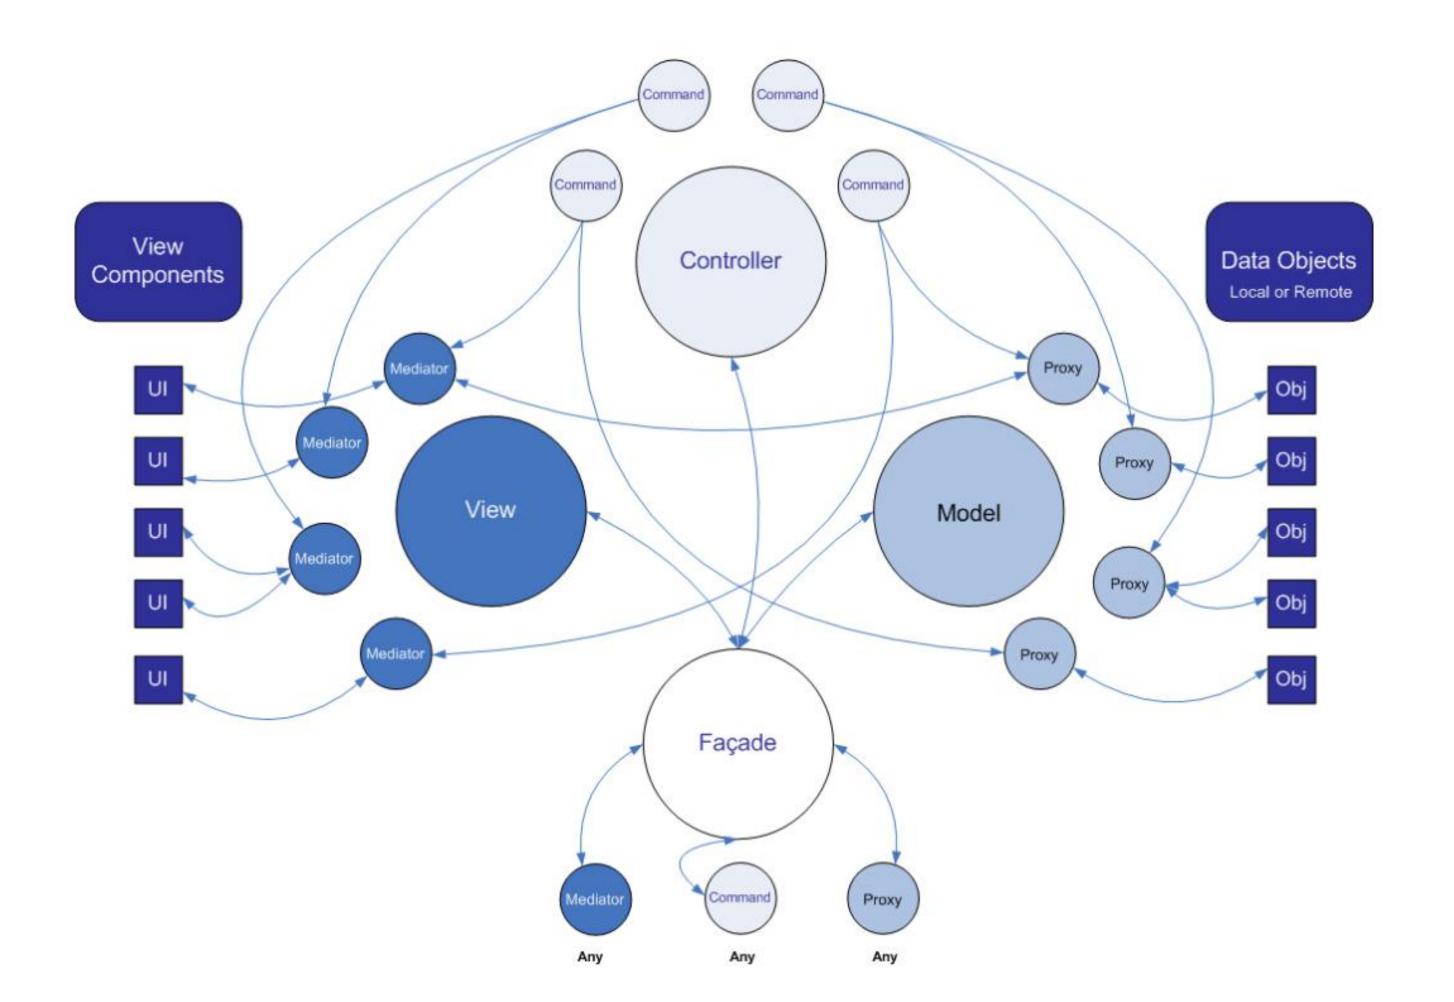

WELCOME TO THE UNITY SPECIALTY COURSE STUDY

PureMVC的基本结构

WELCOME TO THE UNITY SPECIALTY COURSE STUDY

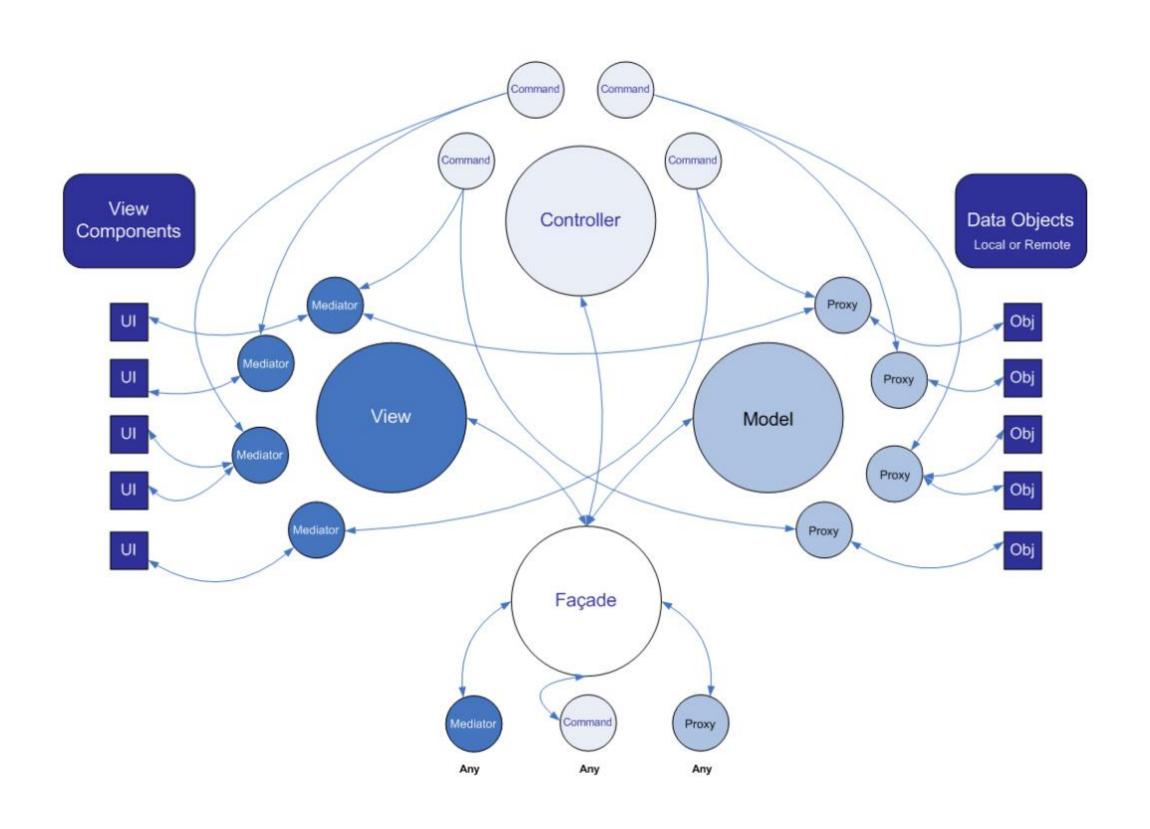

Facade

```
public class GameFacade : Facade
//1.继承PureMVC中Facade脚本
//2.为了方便我们使用Facade 需要自己写一个单例模式的属性
4 个引用
public static GameFacade Instance...
/// <summary>
/// 3.初始化 控制层相关的内容
/// </summary>
3 个引用
protected override void InitializeController()...
//4.一定是有一个启动函数的
1 个引用
public void StartUp()...
```

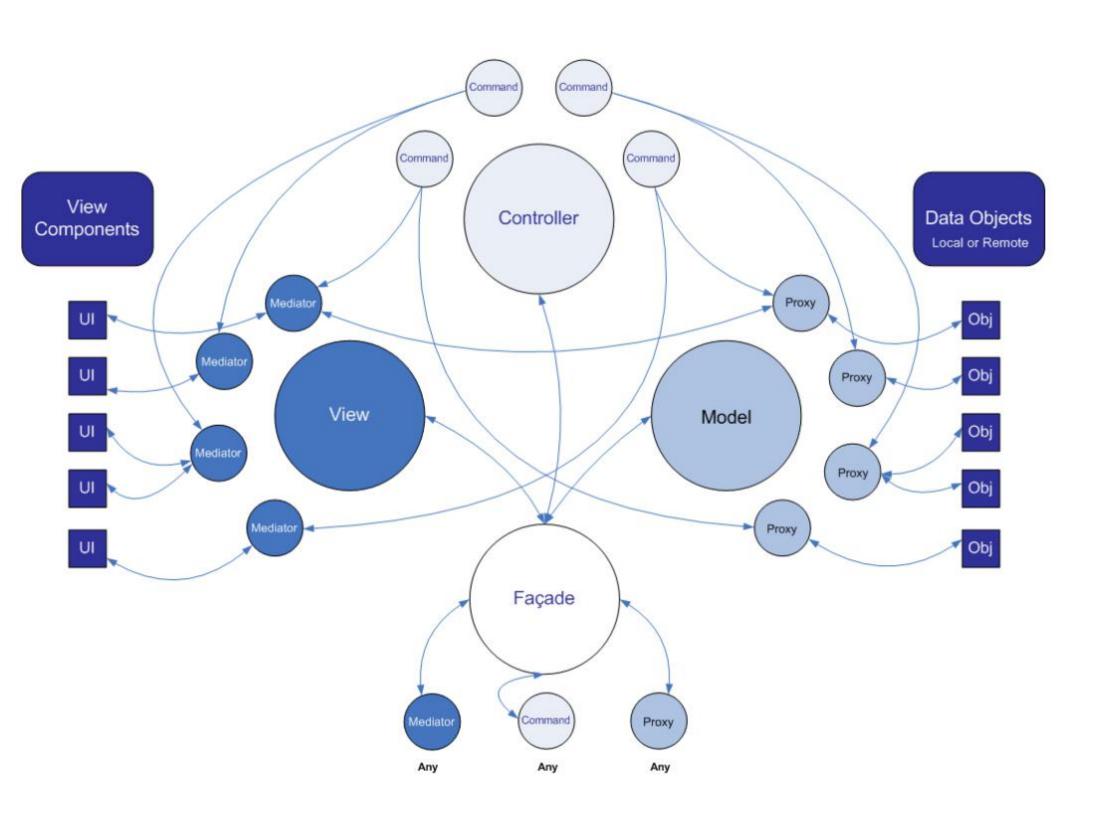

WELCOME TO THE UNITY SPECIALTY COURSE STUDY

Proxy

```
□public class PlayerProxy : Proxy
public new const string NAME = "PlayerProxy";
//1.继承Proxy父类
//2.写我们的构造函数
//写构造函数
//重要点
//1.代理的名字!!!!
//2.代理相关的数据!!!!!
1 个引用
public PlayerProxy()...
 1 个引用
 public void LevUp()...
 1 个引用
public void SaveData()...
```

WELCOME TO THE UNITY SPECIALTY COURSE STUDY

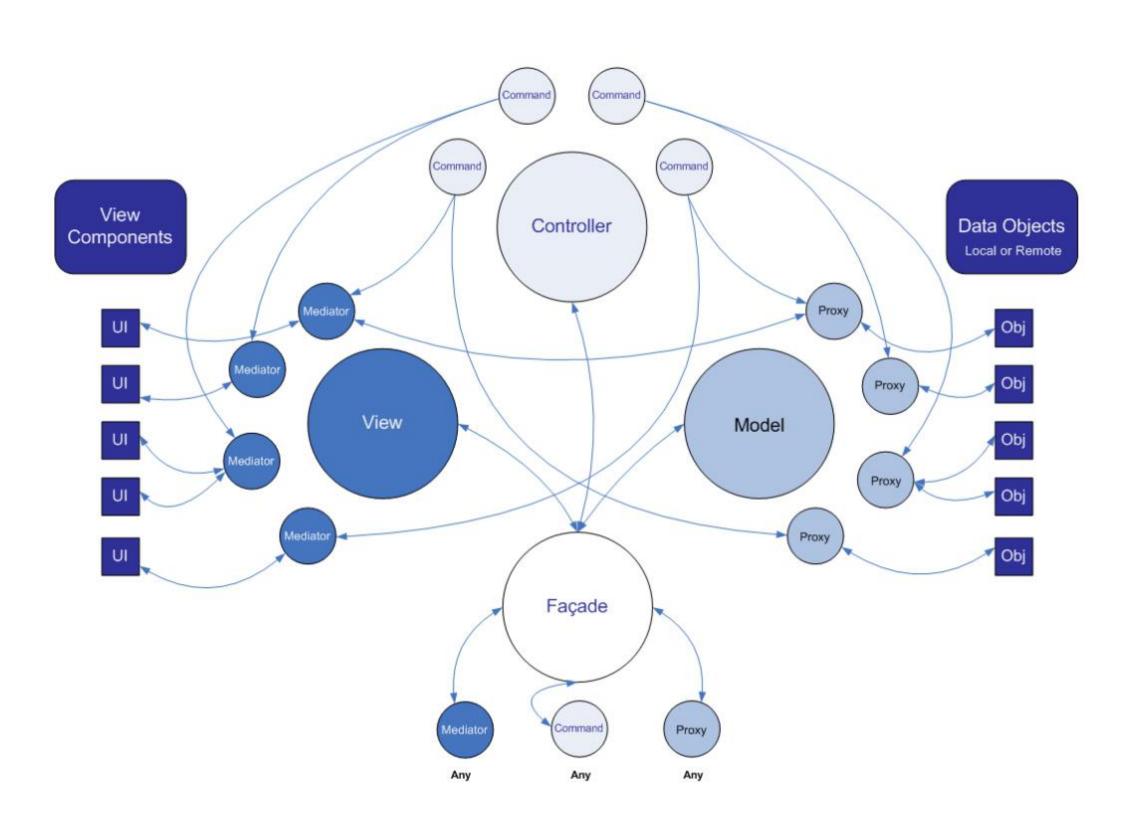

Mediator

```
■public class NewRoleViewMediator : Mediator
public static new string NAME = "NewRoleViewMediator";
//套路写法
//1.继承PureMVC中的Mediator脚本
//2.写构造函数
1 个引用
public NewRoleViewMediator()...
//3.重写监听通知的方法
5 个引用
public override string[] ListNotificationInterests()...
//4.重写处理通知的方法
4 个引用
public override void HandleNotification(INotification notification)...
1 个引用
public void SetView(NewRoleView view)...
```

WELCOME TO THE UNITY SPECIALTY COURSE STUDY

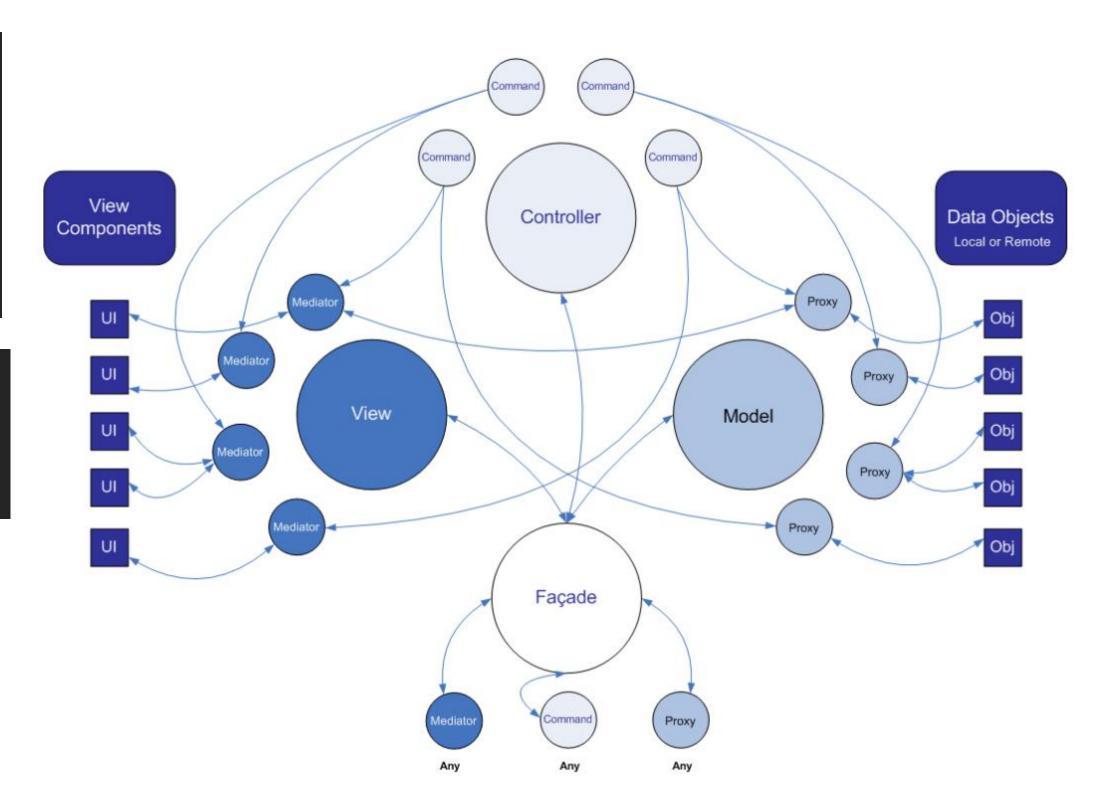

Command

//INotification 对象 里面包含两个队我们来说 重要的参数 //1.通知名 我们根据这个名字 来做对应的处理 //2.通知包含的信息

WELCOME TO THE UNITY SPECIALTY COURSE STUDY

总结

套路写法

先数据

后界面

再用命令做串联

Facade 判断、注册和获取
